ABSTRACT

The English language communication is an open school by the various ways of developing technological devices. The latest inventions with English language spread a line of language progress among illiterates. Electronic gadgets are useful to learn English language as compared to other languages of the world. Communication in English language at various level helps this particularly community to speak and learn easily. The present study will centre on the usages of English language among illiterate persons, that how they use it in their daily lives having not acquired any formal education. This type of communication in English language and learning among illiterates will be proved by this study. This research paper is an attempt to give the readers a new insight in this field and extend the scope of English language skill towards the untouched and unexplored part of communication line among illiterates.

Keywords. *Communication, illiterates, technological, community, skill, gadgets, insight, fluently and usages.*

INTRODUCTION

The communication is working as soul is meant for human being, world's population stands to exist and progress due to the communication. Any sort of language is man's power to live in this world and a source of leading life among human beings is wonderful due to the use of language. Which makes the difference between human beings and other types of creations in this world. English language is developing fast and freely today in the age of science and technology. This language is becoming easy to understand and easy to learn even among the illiterates by the use of different electronic devices. Use of electronics and latest

technological devices among illiterates giving a fresh insight to the usages of English. The illiterates today use various English words while communicating in the society at different walks of life. Illiterate skilled person even know more than that of educated person. It has been studied that simply a driver can name any parts of vehicles where as a person having higher educational degree do not know about parts of a vehicle and the parts of mobile phone. This happen among illiterates who use different dialects other than English dialect. They also use words by imitating users of English language while their communication in business and in other sphere of life. They can count numbers and can name parts of electronic devices. This study can be proved by taking sample in different tehsils of district Ramban in the state of Jammu and Kashmir which falls in the lap of Chenab Valley.

Sample

S No	Name of Tehsils	Total Sample	Use English Words	Not Use of English Words
1	Ramban	5	5	Nil
2	Banihal	5	5	Nil
3	Ukerhal	5	5	Nil
4	Khari	5	4	1

Result

In this research study sampling has been taken from different tehsils of district Ramban from illiterate persons they use different electronic gadgets and having some other sort skill with the latest technological devices. They have been asked different questions regarding the name of various parts of electronics and different English words. In tehsil Ranbam five illiterate persons have asked to name the parts of mobile phone they all answered exactly and it has been proved that they use all latest scientific devices. In tehsil Banihal same number of person have taken for sampling and the result was found accurate as per the expected research study. Tehsil Ukerhal total number of sampling has been taken five, they all answered with an extra zeal with electronic world and it has been found that everywhere electronic gadgets are very helpful for the spreading English language among the illiterates.in tehsil Khari only one person has given irrelevant answered and it has been due to the unavailability of all latest scientific inventions in that particular society.

CONCLUSION

Total number of sample have been taken twenty (20) out of which only one (1) sample has been received irrelevant answer. It means that 95% of illiterates are influenced with the using of electronics and English words. The purpose of this research paper is to provide authentic

picture of the illiterates who are using electronic devices and English words. This research paper is an attempt to show the readers that the development of English language is playing a vital role among the illiterates and changes occurred by the latest technological devices not even among the literates but also among the illiterates. The inference of this research paper is to prove that the illiterates can change their world along with literates today in the age of information technology.
